

Build mature extraction systems before the market forces the lesson.

For licensed operators entering new or tightening cannabis markets, ExtractOS pressure-tests the plan, installs operating discipline, and stays close enough to improve the room after launch.

Plan	Flow	Inputs	People	Data	FLAGSHIP Accountability
Throughput & capex	Facility bottlenecks	Cultivation control	Training & handoffs	Yields, loss, downtime	Ongoing improvement

In fast-growing markets, early momentum can hide weak systems, but margin compression exposes them fast. We bring mature-market pattern recognition to extraction, cultivation, staffing, software, and follow-through **before expensive habits harden.**
